### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 11-13, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kurotori et al (U.S. Pat. No. 4,415,533).

Kurotori et al disclose a wet type electrophotographic image forming apparatus comprising a printer body; a discharge passage formed by the baffle 21 and the exhaust tube (see Fig. 1) to discharge air inside the printer body to an outside (Fig. 1); a blower 7 arranged in the discharge passage to blow air to outside of the discharge passage (Fig. 1); and a catalyst oxidation filter 4 provided in the discharge passage having a matrix coated with an oxidation catalyst to deodorize the air (Col. 4, lines 51-68) and the matrix is a heating mat having a metallic heating element (see Claim 7).

Kurotori et al further disclose the oxidation catalyst comprising a metal selected from the group having a Pd element (i.e. NiO-Pd, Col. 4, line 44), and the filter having a heater 3, the matrix having a metallic honeycomb structure made of an element from the group consisting of Al<sub>2</sub>O<sub>3</sub> (i.e. V<sub>2</sub>O<sub>3</sub>-Al<sub>2</sub>O<sub>3</sub>, Col. 5, line 41), a fusing roller 5 (Fig. 2) in a vicinity of the discharge passage for fusing the toner image.

***Response to Arguments***

3. Applicant's arguments filed 10/25/04 have been fully considered but they are not persuasive. The applicant argues that Kurotori et al do not disclose that the blower and the catalyst filter are provided in the discharge passage. The examiner disagrees because as shown in Figure 1, Kurotori et al disclose that both the blower 7 and the catalyst filter 4 are located inside the discharge passage which is formed continuously by the baffle 21 and the exhaust tube.

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

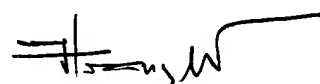

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
